GitHub: github.com/ankit-0131
Email:ankit010106@gmail.com
Mobile: +91 9435763184

Skills

Languages: Java, JavaScript, PHP, Python

Web Technologies: HTML and CSS
Frameworks & Libraries: React.js, Node.js

Tools/Database: MySQL, Linux, GIT

Soft Skills: Problem-Solving Skills, Time Management, Team Collaboration, Adaptability

Projects

Rent-A-Ride | GitHub Link |HTML,CSS,Js | Oct'25 - Nov'25

- Established the purpose of building a student-focused car rental platform that prioritizes accessibility, intuitive navigation, and a modern user experience.
- Engineered a fully responsive and scalable frontend solution using HTML, CSS, and JavaScript, incorporating intuitive login/signup interfaces, seamless light and dark theme switching, and modular, reusable vehicle listing components with clear pricing structures, optimized layout consistency, and enhanced usability across multiple devices and screen sizes
- Enhanced frontend development and UI/UX skills by building a responsive, interactive web interface with reusable components, theme switching, and smooth animations, improving both usability and design consistency

Land Tax and Property Management System | GitHub_Link |HTML, CSS, JS, PHP | Feb'25 - Apr'25

- Defined the purpose of developing a robust Land & Property Management System to streamline land record handling, ensure data accuracy, and improve accessibility for efficient property tracking and management.
- Architected a full-stack solution using PHP and MySQL, implementing optimized CRUD operations, a well-normalized relational database schema, and secure session-based authentication with server-side validation to enable reliable data storage, fast retrieval, and protected record workflows.
- Strengthened backend development and database management expertise by building a secure, high-performance system focused on data integrity, query optimization, and real-world application of authentication and validation mechanisms.

Training

CipherSchools Jun' 25 – Jul' 25

Data Structures using C++

- Implemented core Data Structures including arrays, linked lists, stacks, queues, trees, and graphs in C++, strengthening problem-solving foundations and coding efficiency.
- Practiced algorithmic techniques such as recursion, sorting, searching, greedy methods, and basic dynamic programming to improve logical thinking and solution optimization.
- Applied time and space complexity analysis (Big-O) to evaluate algorithm performance and refine solutions for better scalability.
- Developed a mini-project applying DSA concepts (e.g., task management / library system / student record manager), integrating data structures for efficient data storage and retrieval.

Certificate

Privacy and Security in Online Social Media| **NPTEL** Apr'25
Packet Switching Networks and Algorithm| **Coursera** Nov'24

Achievements

Secured Learner Badge in MongoDB Indexing Design Fundamentals | Jun'25
Secured Learner 3star Silver Badge on Hackerrank| Hackerrank Nov'25

Education

Lovely Professional University Phagwara, Punjab Aug'23-Present
Bachelor of Technology
Computer Science and Engineering CGPA:6.61

Kendriya Vidyalaya No.1 Airforce Station Adampur, Punjab Apr'22 – Mar'23
Intermediate; Percentage: 68%

Kendriya Vidyalaya Airfroce Station Avadi Chennai Apr'20 - Mar'21
Matriculation; Percentage: 85%
